

# SUPER SECRET CHAIN COATING

## Hot Wax Performance in a Drip-Applied Formula

SILCA **Super Secret Chain Coating** offers a nearly hot melt-level experience in a convenient drip application. While immersive waxing remains the gold standard, this advanced formula—powered by NanoPlatelet Tungsten Disulfide (WS2)—delivers exceptional efficiency, cleanliness, and durability for those seeking a high-performance alternative without removing their chain.

### PRODUCT FEATURES

#### Hot Wax Performance Without Hot Melt Application

- Nearly matches the efficiency of immersive waxed chains with the ease of a drip-on liquid application.

#### NanoPlatelet Tungsten Disulfide (WS2) Technology

- Proprietary formula that bonds to metal surfaces, forming a low-friction protective coating that improves efficiency and extends the lifespan of drivetrain components.
- A top-ranking chain lubricant in independent laboratory testing by ZeroFrictionCycling.com.au, where wax-based lubricants have been shown to outperform synthetic lubes in real-world scenario testing blocks.

#### Exceptionally Clean and Long-Lasting

- Does not attract dirt, dust, or grit.
- Ideal for road, gravel, and mountain biking in dry and mixed conditions.
- Extends chain life up to three times longer than traditional synthetic lubricants.

#### Designed for Waxed Chains and Drivetrain Maintenance

- Serves as a touch-up application for chains previously treated with hot melt wax.
- Compatible with SILCA Secret Chain Blend (Hot Melt Wax) for continuous drivetrain optimization, and is part of the larger SILCA chain waxing ecosystem of products.

240 mL (8 oz) Drip Bottle

#### Requires Proper Drying Time

- This is not an apply-and-ride product. Drying time varies based on environmental conditions and may take several hours. Proper drying is required for optimal performance.

For best results, watch Josh Poertner's expert video on proper chain lube application, one of the most-watched videos on the SILCA Velo YouTube channel. This video covers a refined method of application based on extensive testing, which represents

an evolution in how SILCA recommends lubricating a chain. Even experienced mechanics will find the insights valuable:

## WHO IS SUPER SECRET FOR?

SILCA Super Secret Chain Coating is designed for road, gravel, and mountain bikers looking for a cleaner, more efficient, and longer-lasting drivetrain. Wax-based lubrication is ideal for nearly all riders and conditions, offering:

- Superior efficiency and longevity compared to traditional lubricants.
- A cleaner drivetrain with no build-up of gritty paste.
- Easier maintenance without harsh or toxic degreasers.
- A better riding experience with smooth, silent performance in all conditions.

## APPLICATION & USAGE

**STEP 1:** Start with a clean, dry chain. For best results, strip factory grease before first use using **Ultimate Chain Stripper + Wax Prep**.

**STEP 2:** Apply a steady stream to the chain rollers while backpedaling in front of the cassette in a cross-chaining orientation to help open the links.

**STEP 3:** Allow to dry fully before riding. Drying time varies and may take several hours depending on environmental conditions.

**STEP 4:** For waxed chains, apply as a touch-up between hot melt rewaxing cycles.

### CHAIN WAX STARTER PACK

4 oz. Drip Bottles

AM-AC-050-ASY-0200

## Waxing Starter Pack for Easy Conversion

The SILCA Waxing Starter Pack includes Super Secret Chain Coating and **Ultimate Chain Stripper**, providing a simple, on-the-bike method to convert a chain to wax without removing it.

**Tested & Used by Professional Teams**

The chain coating of choice for **Team VISMA | Lease a Bike** and other elite riders in many disciplines.
